a
1 Noise-driven escape from rest
log σ only (pseudo-R²=0.69)
log σ, J11, J12 (pseudo-R²=0.97)
Kramers: log σ, d0/σ^p (pseudo-R²=0.95)
observed P(premature)
predicted P(premature)
b
2 Sub-threshold attractor trapping
winning rate at the attractor (Hz)
no-decision rate
choice-attractor rate
read-out threshold θ=22.6 Hz
timeouts (σ=0.020)
self-excitation J11 (nA)
c
3 Blindness to loss of competition
behavioural metrics
rate of losing population (Hz)
cross-inhibition J12 (nA)
accuracy
mean RT (normalised)
losing-population rate
