
a
Single trials, 12.8 % coherence
stimulus on
population 1 (favoured)
population 2
decision threshold θ
rate-equivalent $r_i = S_i/(\gamma\tau_S(1-S_i))$ (Hz)
time from stimulus onset (s)
b
Psychometric function
proportion correct
Weibull fit (α=5.9 %, β=1.24)
simulation (95 % CI)
motion coherence (%)
c
Chronometric function (±SEM)
correct
error
mean reaction time (ms)
motion coherence (%)
d
RT distributions, 6.4 % coherence
correct (n=832)
error (n=167)
probability density
reaction time (s)
