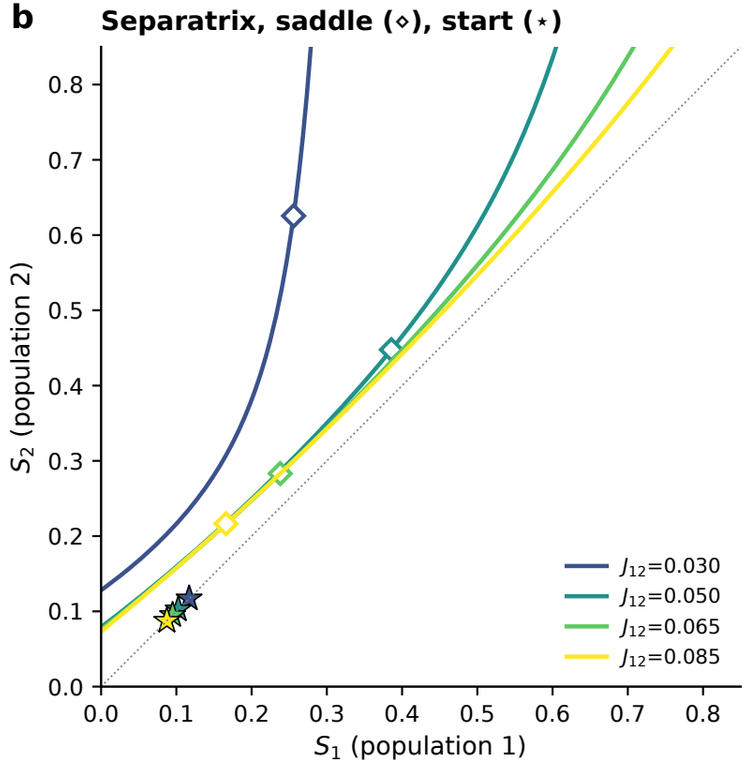
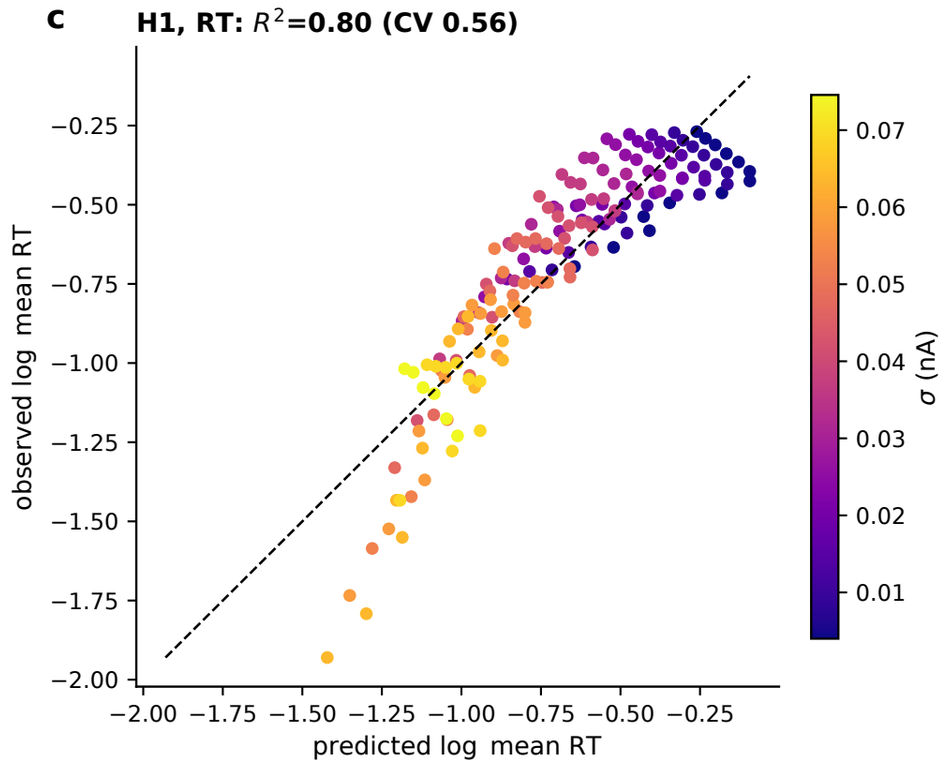
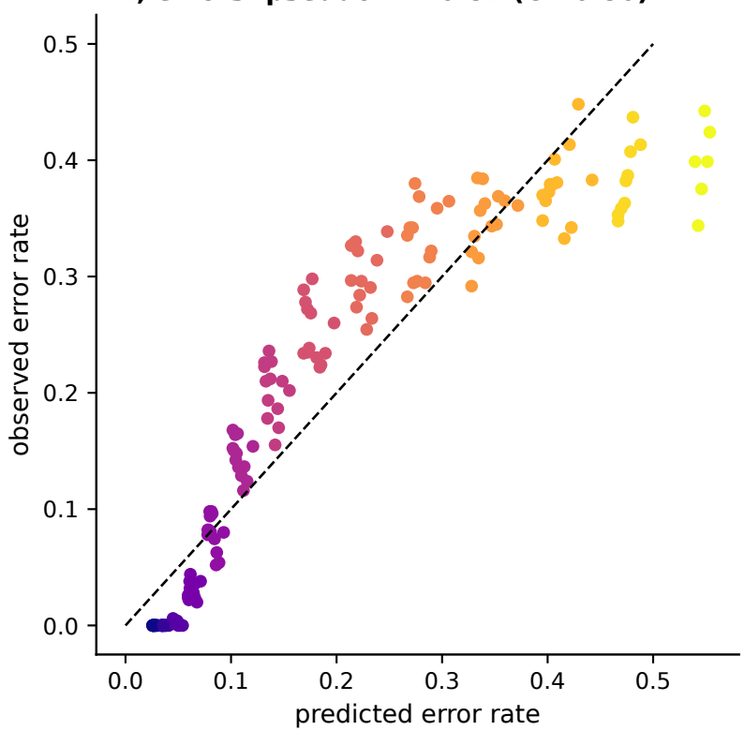
a
Deterministic geometry, 12.8 %
unstable eigenvalue λ_u (s^{-1})
signed distance d to separatrix
cross-inhibition J_{12} (nA)



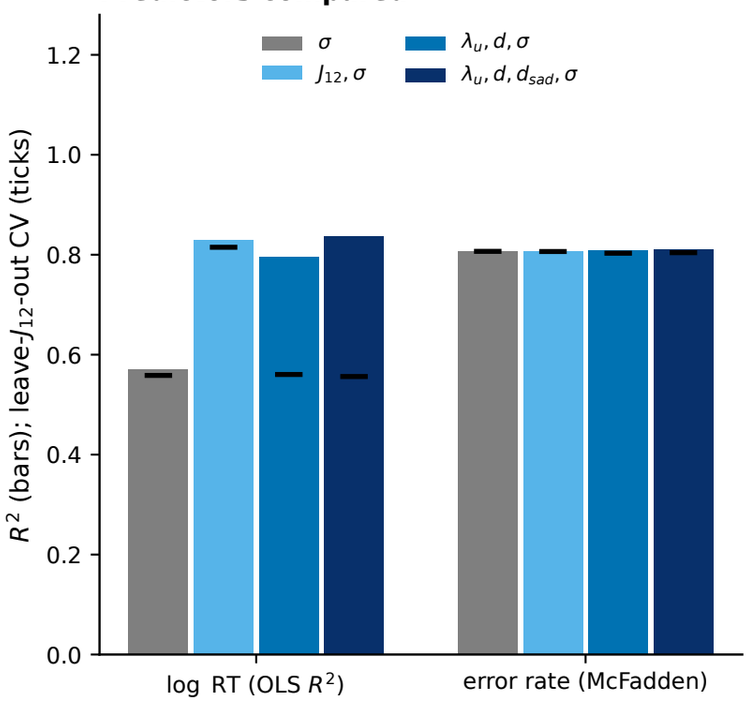
b
Separatrix, saddle (⋄), start (⋆)
S_2 (population 2)
S_1 (population 1)
J_{12}=0.030
J_{12}=0.050
J_{12}=0.065
J_{12}=0.085



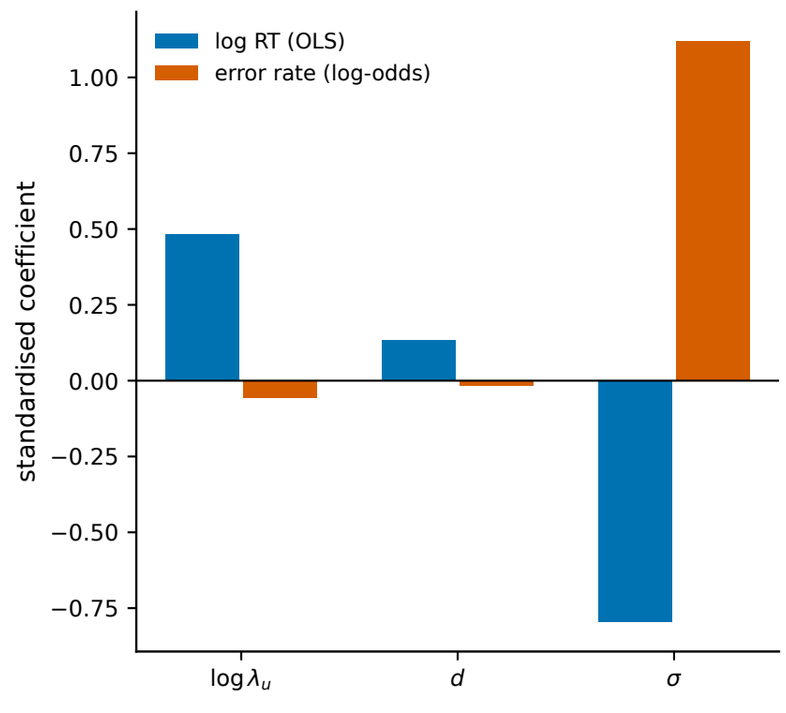
c
H1, RT: R^2=0.80 (CV 0.56)
observed log mean RT
predicted log mean RT
σ (nA)



d
H1, errors: pseudo-R^2=0.81 (CV 0.80)
observed error rate
predicted error rate



e
Predictors compared
σ
J_{12}, σ
λ_u, d, σ
$\lambda_u, d, d_{sad}, \sigma$
R^2 (bars); leave-J_{12}-out CV (ticks)
log RT (OLS R^2)
error rate (McFadden)



f
Geometric model: effect sizes
log RT (OLS)
error rate (log-odds)
standardised coefficient
log λ_u
d
σ
